

Sustainability Charter

Charter Statement

Axiom Infrastructure is an independent investment manager with a buy-and-hold investment approach. We invest in core infrastructure assets with the aim of delivering strong and stable returns over a long-term investment horizon. We define core infrastructure investments as assets that deliver services that are essential in nature.

We focus on fostering trustworthy partnerships with the aim that it translates into consistent long-term performance.

Our vision

Infrastructure assets are often constructed and operated physically in and around the community they serve and hence can have a direct impact on the population and the environment. As managers of infrastructure investments, we pursue our business endeavors in a manner that integrates Environmental, Social and corporate Governance (ESG) concerns. As long-term investors, we believe that sustainable development and ethical investment practices are essential to value creation. We also believe that as part of our fiduciary duty to our Limited Partners, we must integrate ESG into our investment process.

Our vision goes beyond minimizing environmental and social impacts: it is about sound business practices. This is why we aim to apply responsible investment strategies; from the partners we chose to the projects we select. It is with transparency and open dialogue that we build long-term partnerships with our stakeholders.

Our commitment to Responsible Investment and ESG

Infrastructure sustainability is the product of a holistic approach to investment that includes ESG concerns and responsible investment practices within the business environment. We are committed to integrating ESG in our activities and to ensuring that we deliver transparent and relevant reporting.

In relation to the environment:

- Our investment activities will seek to contribute to the sustainable development of the communities in which we invest
- We will consider the impact of our activities on climate change and factor this assessment in our investment decisions
- We will strive to implement best environmental practices when planning and executing our investment strategies

In relation to social responsibilities:

- The health, welfare and safety of our team members and all involved on our projects is paramount and will be a primary concern
- We will respect the rights and concerns of people, communities and stakeholders potentially impacted by our activities
- We will encourage community involvement and consultation in our investment activities

In relation to corporate governance:

- We will act with fairness, integrity and transparency with our partners and stakeholders
- We will promote fair operating practices for our own activities as well as those of our partners
- We will support fair wage and employment practices and only invest in projects whose management demonstrates strong and healthy labour relations.

Our way to enforce our commitment to sustainability

Our team is responsible for ensuring that ESG and responsible investment considerations are integrated into all of our work, from the pre-investment phase to day-to-day asset management.

Tools have been developed for the investment team and asset managers to ensure that risks are identified, measured and properly mitigated. As a manager, this enables us to make good investment decisions, optimize our portfolio's performance and ultimately deliver sustainable value to our Limited Partners.
